Projects

Movie Time Web Application   Summer 2022
JavaScript, MongoDB, Node.js, Express, Heroku, Insomnia, React, Google OAuth
- Deployed a movie web application for users to search, rank their favorites and leave reviews of movies.

PetTin Android Application   Summer 2022
Java, Firestore, Firebase Authentication, Android Studio, Google Maps API
- Developed an Android application for users to match their dog with another dog with similar playstyles.
- Additional features included finding nearby pet-friendly restaurants and group messages.

Let's Book It REST API   Spring 2022
Java, Amazon RDS for MySQL, Spring Boot, Postman
- Created a REST API for event planners and small businesses to easily track events and costs.
- Led a group of three using the Agile methodology and Notion to build a REST API.

Quantified Self Web Application   Summer 2021
Java, MongoDB, Spring Boot, Chart 8JS, React, Junit 4, CodeMR
- Built a full stack application with the client-server model where the user can query and view graphs of the data gathered from their wearable technology.
- Used a test-driven development approach and achieved 70% coverage.

Work Experience

Wyzant Tutor - Wyzant Tutoring   Online | August 2022 - Present
- Review the course material with students to help them understand concepts and how to approach a project.
- Walk through the student's code to help them understand their code and debug any problems.

Paralegal - Seattle Litigation Group, PLLC   Seattle, WA | April 2018 - August 2022
- Partnered with attorneys to draft legal documents and communications with opposing parties and clients.
- Fostered client relationships to collect information and documents and explain the legal process.
- Implemented case management software for attorneys and support staff to improve workflow and efficiency.

Teaching Assistant - Northeastern University   Seattle, WA | May 2021 – May 2022
- Held weekly office hours to coach students through their homework design and concepts covered in lectures.
- Facilitated labs to guide students in understanding concepts of Java and object-oriented design.
- Reviewed code and design to grade homework and labs for up to 10 students.
- Helped students understand the software development process and use of git operations.
